

Retrofit **DIE-RECOGNITION** System FOR MANUAL SEALING MACHINES

Vision Engineering, Inc. is proud to introduce a Retrofit Die-Recognition System for Manual Sealing Machines.

Our system will identify the current die using a 2D Barcode and then verify that the process time, temperature, and pressure settings are correct for that die. Our system will not allow the sealer to seal unless the settings match the current die. Optionally, the software can record and archive lot numbers, die ID numbers, and the sealer settings.
